

Kanishq Surendran

Full Stack Developer Intern

kanishqflash@gmail.com | +91 98860 88053 | Bengaluru, India | [linkedin.com/in/kanishq-surendran-058010333](https://www.linkedin.com/in/kanishq-surendran-058010333)

Computer Science undergraduate (PES University) with hands-on full-stack production experience across mobile, backend, and cloud infrastructure. Ships fast and learns on the fly, building a fully working Google Maps Android app in 48 hours with zero prior Android experience to win a competitive internship placement, and has since built a production CRM system end-to-end from an empty repository.

EDUCATION

B.Tech, Computer Science & Engineering

2024 – 2028

PES University, Bengaluru | CGPA: 7.61/10

EXPERIENCE

Full Stack Developer Intern, Dot2Dot Technology Private Limited

Jun 2026 – Present

- Selected as the sole hire from 120+ applicants after independently building a fully functional Android app integrating the Google Maps API (geocoding, live location, satellite/3D views) in 48 hours, in a language never used before.
- Built CRM Cockpit and the company website (propertywallet.in) entirely from scratch (frontend, backend, and database), both now live and used daily, wired to the same Spring Boot backend.
- Made the architectural call to route all data through the Spring Boot backend rather than letting frontends talk to Supabase/Postgres directly, keeping the client and database layers cleanly separated across both products.
- Contributed frontend features to Property Wallet, a React Native (Expo) real estate app deployed on both the Google Play Store and Apple App Store, including a Google Maps location screen with OSM/Overpass building-outline lookup, shimmer animations, keyboard-avoidance fixes, and multi-PDF sharing.
- Designed the entire set of app store preview screens for Property Wallet from scratch, covering both the Google Play Store and Apple App Store listings.
- Migrated the Spring Boot backend from local Docker to AWS (EC2, RDS PostgreSQL, VPC/security groups), learning cloud infrastructure from the ground up.

Full-Stack Developer, Client Project, Nayoda

2026

- Ranked 23rd out of 450 applicants for the role; building SkillSphere, a full-stack MERN freelance marketplace, as an independent client engagement with a live screen-share delivery review.
- Implemented email verification, TOTP two-factor authentication via Google Authenticator, real-time chat with Socket.IO, and an S3 bucket for file and video sharing.

PROJECTS

Smart Safety & Obstacle Detection Robot, Inter-College Showcase

Mar 2026 – Apr 2026

- Built a sensor-driven robot detecting obstacles, fire hazards, and gas leaks with autonomous navigation and safety monitoring, handling sensor integration, programming, testing, and debugging end-to-end.
- Selected for exhibition at an inter-college showcase, one of a small handful of projects chosen from roughly 100 student entries.

OrbitDesk Support Agent, Personal Project

- Built a fully local, offline support chatbot around a four-stage LangGraph pipeline (triage, retrieval, generation, verification) so it only answers from a knowledge base and never guesses, using sentence-transformers embeddings and a local Qwen2.5-1.5B LLM.
- Added a hard-coded guardrail to block unsupported requests and prompt injection, deployed the pipeline on CUDA hardware, fixed a retry-counter routing bug, and tuned the triage prompt with few-shot examples to cut false clarification requests.

SKILLS

Languages: Java, JavaScript/TypeScript, Python, C, SQL

Frameworks & Libraries: React, React Native (Expo), Node.js, Express.js, Spring Boot, LangGraph

Databases & Cloud: PostgreSQL, MongoDB, Supabase, MySQL, AWS (EC2, RDS), Docker, Cloudflare Workers

Tools & Other: Git, REST APIs, Google Maps API, Hugging Face

EXTRACURRICULAR

Member, IEEE SB PESUECC (Tech Domain): selected into the Tech domain of the IEEE Student Branch, PES University EC Campus.

Volunteer, Symposium 2.0: designed promotional posters and supported event coordination and operations.

Hackathon Participant: collaborated on a team project under time constraints in a competitive problem-solving format.

CTF Competition: placed 34th out of 135 teams in my first Capture The Flag competition.
